

Inventist to Debut FizzSaver at 2009 International Home and Housewares Show

CAMAS, WA - March 17, 2009 -- Inventist Inc. has announced today that it will debut the FizzSaver at the 2009 International Home and Housewares Show in Chicago at McCormick Place, March 22-24. Come and see this cool new product at Inventist's booth - S2771.

Many people prefer cans of soda because with a 2-liter bottle, the fizz never lasts long. The general design allows air into the bottle which depletes the carbonation, leaving the soda drinker with a dull, lifeless, flat beverage. In 2009 all of this will change with the FizzSaver.

The FizzSaver traps the carbonation in the top of bottle allowing users to enjoy their carbonated drinks over a longer period of time. Using the soda's carbonation to keep pressure in the bottle, the FizzSaver lets users get every last fizzy drop out of their 2-liter bottle.

The FizzSaver is so easy anyone can use it. Simply remove the bottle cap and screw on the FizzSaver in its place. Next, invert the bottle, put the FizzSaver on any flat surface, and pour yourself a fresh, fizzy drink. For the most refreshing beverage, place the FizzSaver right in your refrigerator door and pour your next chilled drink without a hassle. The FizzSaver gives you all of the Fizz...not the Fizzle.

After you finish the bottle, cleaning the FizzSaver is a breeze, just throw it in the top rack of your dishwasher. Once it's clean pop it on to your next bottle and continue enjoying fizzy drinks.

Stop throwing money down the drain with dull, flat soda and start enjoying fresh, fizzy soda now. Purchase a FizzSaver today, your mouth will thank you.

Here is what some customers are already saying:

"Keeps your soda fizzy and turns the bottle into a bar style tap."
 "...good for people who don't finish bottles rapidly."

To see the FizzSaver in person come to the International Home and Housewares Show in Chicago at McCormick Place, March 22-24, 2009. To set up an interview with the owner of Inventist, and inventor of the FizzSaver, Shane Chen, please contact Jarrelle Harper at 360-833-2357 x 300.
